

## Renewable Energy is Affordable Energy

Arctic Sun is committed to helping make renewable energy affordable across Alaska. To this end, we have researched and reviewed several local and national loan options, and selected a few that we believe will serve most of our customers' needs. Which option is best for you?

### Option #1:

#### Arctic Sun In-House Financing

If you can afford a 50% down payment on your complete system and would like to delay payment of the balance for up to a year—until your federal tax return arrives—we recommend Arctic Sun's In-House Financing Plan.

### Option #2:

#### GEOSmart Plan #3142 – 12 Months No Interest, No Payment

If you would like to defer 100% of the cost of a system for one year, then the GEOSmart Plan #3142 may be your choice. This plan includes a higher, variable interest rate, however, if the entire balance is not paid within the year.

### Option #3:

#### GEOSmart Plan #1209 – 9.99% Fixed APR Financing

If you would like to finance your entire system over a period of ten years, then the straightforward GEOSmart Plan #1209 may be your option. This plan has a fixed rate of 9.99%.

### Option #4:

#### Local Bank 2<sup>nd</sup> Mortgage or Home Equity Line of Credit Programs

If you have enough equity in your home, local bank financing at mid-level interest rates may be available for the full amount of your system. Rates vary and are dependent upon current Prime Rates, customer credit scores, and other factors.

So, anyway you look at it, Arctic Sun has a plan to fit your energy needs and your budget.
